

# Make your own Super Pressure Balloon!

Time to make your own Super Pressure Balloon (SPB)! Tear or cut at the solid black line and follow the instructions to fold the SPB below. When you are done please snap a picture and share with us using the tag #MyNASABalloon.

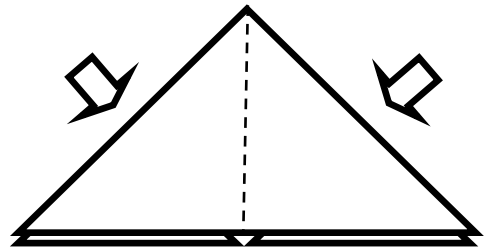

## Step 1:

Crease in half and on the diagonal on the dotted lines printed. The half fold has the material on the inside and the diagonals on the outside.

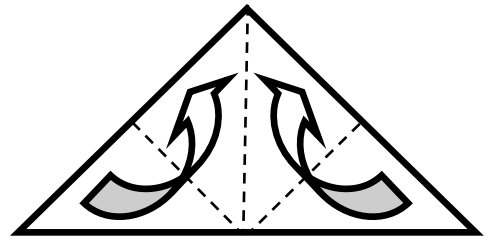

## Step 2:

Fold along the creases from step one by pushing the half fold lines in so the printed material is facing out.

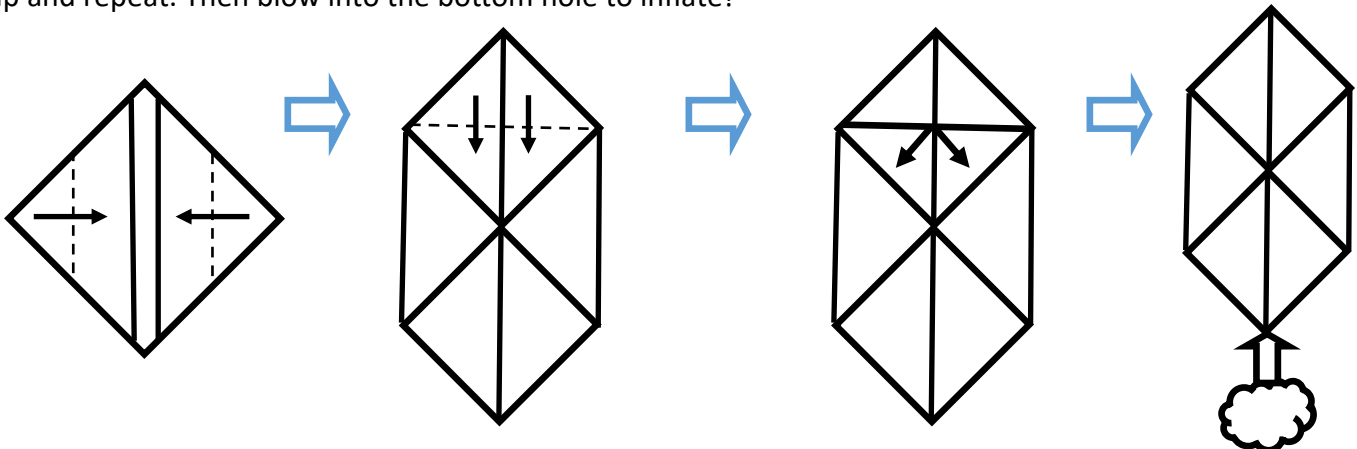

## Step 3:

Fold the corners to the top point, flip over and repeat until you have a diamond shape, then fold in the points toward the center (flip and repeat).

## Step 4:

Fold the top points in half towards the center, tuck the folded section into the pocket formed by the sides, flip and repeat. Then blow into the bottom hole to inflate!
